

# And now, some good news...

More than 60 percent of the Northwest's electricity comes from clean hydropower— up to 85 percent for public power utilities.

Hydropower reduces carbon emissions by supporting barge transportation, which keeps 700,000 trucks off the highways annually.

Through research and investment in fish-friendly improvements, there are more fish in the Columbia River today than at any time since Bonneville Dam was completed in 1938.

**Big splash, small footprint.**  
**Hydropower.**
